

Ball targets for 2.25-inch diameter balls.

Print out this page. You may have to choose “no scaling” as one of the print options to get the correct size.

Cut out as many targets as you need. Optionally, cut out the center of each target which will allow you to place the target on the cloth by the cushion at the contact point. The hole permits the cue ball to rub on cloth during the rail collision. The hole also allows centering on a diamond sight on the rail.

To make the targets more durable, print on heavier paper and cover them with clear packing tape.
